PREPARED 01 NOVEMBER 2026

Football Match Analysis Tool

Danielle wants to replace several hours of daily manual football-match checking with a reusable AI or automated workflow. Starting point is PrediGoal's match listings: screen teams by recent form (>75% versus <35%), then capture win/draw, BTTS, and over-2.5-goals probabilities for matches 1–2 days ahead. Source page is saved as a reference; page content appears dynamically loaded, so actual data access and whether this should be a self-run daily tool or an unattended report remain to clarify.

01 / 04 About the client

DW is based in the United Kingdom and is building a football match analysis tool for personal use.

BUDGET
$300

02 / 04 Overview

I use PrediGoal's matches page and subscription to review recent form. I want a web-based tool for personal use that automatically screens matches one to two days ahead, showing fixtures where one team's recent form is above 75% and the other's is below 35%, along with each team's exact win, draw, both-teams-to-score, and over-2.5-goals probabilities. The developer should check for an authorized way to access the required data. I'm looking for a simpler first version that fits my £300 ceiling.

03 / 04 Goals

Reduce the several hours currently spent checking matches each day.

04 / 04

Daily Match Analysis

For matches one to two days ahead, identify games where one team's recent form is above 75% and the other team's is below 35%. For qualifying matches, provide the exact probabilities for each team to win, a draw, both teams to score, and over 2.5 goals.
